

# Top 10 tips

To keep your Alfa Laval valve in tip top condition

- 01** Make regular service and maintenance on your Alfa Laval valves for them to be able to perform optimally. The most cost-effective approach is following our simple preventive maintenance programme which will prolong the lifespan of your Alfa Laval valves.
- 02** Use optimum air quality in operating the valves, i.e. avoiding dust, water and oil in the air system for a longer lifetime and service interval on the actuators.
- 03** Only operate within temperature ranges specified in the instruction manual to ensure smooth operation.
- 04** Follow the technical data during installation, operation and maintenance to ensure correct operation.
- 05** Regularly inspect your Alfa Laval valve for leakage to ensure your process is running efficiently.
- 06** Carefully monitor your cleaning process since the composition of the cleaning solution can over time affect the rubber.
- 07** In order to ensure the longest possible lifetime for rubber seals it is essential to choose the right quality for the actual duty.
- 08** Always use Alfa Laval genuine spare parts which are designed for durability and performance.
- 09** For product wetted parts ensure lubrication with Fuchs Cassida MD 2 or a similar approved grease which makes maintaining your Alfa Laval valve easier.
- 10** Always keep Alfa Laval spare rubber seals in stock to avoid unplanned downtime.
